Regulatory Compliance

An Operational Efficiency Story:

Using Instrument Manager™ (IM) from Data Innovations, St-Jansdal Hospital had honed their autoverification rules so well that only 1% of their samples required manual review. Their challenge: "How do we know when a sample needs review?" They turned to IM's Notifier feature. In addition to pop-up messages and emails, a centrally mounted light pole alerts technologists when there is an exception, further increasing the labs efficiency and improving their workflow.

- Automatic notification to lab personnel when intervention is needed

- 99% reduction in CC/IA samples requiring manual review

- Real-time QC monitoring integrated with autoverification

- Reduced staff fatigue while experiencing a 10% increase in volume
